

WESTLAKE BIKE PATH MAKING PROGRESS

The concrete portions of the west ten foot wide concrete combination bike and pedestrian path has been installed along the north side of Superior from Calumet Avenue about 1200 feet west. Also as a part of the same project, about 800 feet of ten foot wide path was installed along the south side of 45th Street from the CSX railroad crossing east in front of Whole Foods and Collision Revision. Both of these businesses paid 50 percent of the cost of the path in front of their property. The project began too late in the season to connect the two concrete paths with a ten foot asphalt path which will be placed along an easement from Collision Revision south to Superior. This work will be done in the spring when the paving contractors resume. If you have questions about this project, call James Mandon, PE, town engineer, at 836-6995.
