Description:

This is a balancing change for final quantities on the project.

In addition to typical over/under quantities for a typical paving project, significant overruns resulted from subbase repair on Timrick Drive. This street was slated for mill and overlay, but after removing the pavement, poor soils were discovered in the subbase. Six inches of material were removed, geotextile fabric was installed, and 6 inches of aggregate base was placed on the roadbed prior to paving to provide a stable foundation for the new roadway.
