Re: Improvements to pool slides

In our continued efforts to improve and update the Community Park pool, staff have identified a need for capital maintenance improvements to be made to the pool slides. The attached proposal from SlideRite includes crack repair, sanding, slide repairs, cleaning, and gel coating of the interior of the large white slide and the interior of the smaller red slide.

Additionally, it includes the painting of the treads and landings for the same two slides. The treads and landings painting includes adding a 'grit' in the paint which acts to reduce slipping on the stairs and landings when pool patrons with wet feet are using these features. Over the years, the previous grit has worn down.

SlideRite has satisfactorily performed other work for us at the pool in the past including gel coating of the slide in the zero-depth area last year. SlideRite has indicated that they could get this work done this year if the proposal is approved today. A second proposal was received from Slide Guys Restoration Inc. at a cost of \$59,000. Funding for this work will come from previous bond issue projects that were completed for less than budgeted amounts.

Recommendation:

Staff is recommending acceptance of the proposal from SlideRite dated 7/21/23 for the work as described above at a cost of \$27,100.
