BACKGROUND

Kimley-Horn & Associates has submitted plans on behalf of Target Corporation to install four additional light fixtures on two existing poles within the parking lot of the Target Store at 8005 Calumet Avenue. Two new fixtures will be installed on each pole, for a total of four fixtures per pole. The purpose of the new lights is to increase illumination of the newly designated "Drive Up" area of the parking lot. This area consists of one double-loaded bay of parking that will be restriped to provide a walkway between the parking spaces and identified with permitted informational signs. The area will be used by customers for picking up online orders, which will be delivered by Target staff directly to vehicles.

The proposed light fixtures are identical to the existing lights in the Target store parking lot, which were installed in the early 2000s when the store was constructed. The proposed lights do not conform to the height, color temperature, and head/luminaire standards adopted by the Town in the 2019 zoning ordinance. Additionally, the proposed lighting exceeds the overall illumination maximum for the site. The attached photometric plan was updated January 5, 2022, to confirm the average light level for the entire site.

Figure 1: Existing Target Light Pole

In 2019, the Town approved plans for the interior and exterior remodeling of the subject property. That project commenced this year and is nearly complete. The remodel included upgrades to the façade, new signage, new and enhanced landscaping, and substantial changes to the interior of the building. In connection with that remodel, the site was granted variances for signage and landscaping under dockets BZA 19-004 and BZA 19-006, respectively. In both cases, the BZA approved the variances after giving consideration to the fact that this Target store was originally constructed under a different set of zoning standards which made it difficult to comply with current standards while making the desired improvements.

DISCUSSION

The variances being requested in connection with this project are as follows.

Code Section	Standard	Permitted	Proposed
Section 26-6.405.Q.2.b	Lighting Standards or Poles - Height	Maximum Height 20 feet	39 feet
Section 26-6.405.Q.3.a	Illumination – Average, minimum, maximum	Illumination of Parking Areas, Parking Lots, Parking Structures, and all pedestrian ways shall be provided at an average of 1.0-2.5 footcandles and a minimum of 0.4 foot-candles	3.96 footcandles
Section 26-6.405.Q.3.c	Illumination – Color Temperature	Maximum 3000K	4000K
Table 26-6.26-6.405.Q-1	Private Lighting Types – Head/Luminaire Types	Colonial head, coach head, acorn head	Shoebox – see attached spec sheet

At the preliminary hearing held on December 14, 2021, members of the Board of Zoning Appeals asked whether the existing lighting is the same lighting that was onsite 20 years ago when the subject property was a Montgomery Wards store. Staff has reviewed aerial photos and a plat of survey from the 1990s and determined that the site lighting was completely reconfigured when Target redeveloped the subject property – the number and location of light poles are clearly different. Additionally, the photometric plan and fixture spec sheet indicate that the site lighting is modern LED lighting.

As noted above, at the time of the preliminary hearing, it was unknown whether the overall site lighting exceeded the maximum illumination permitted by the zoning ordinance. A revised photometric plan dated 1/5/2022 was submitted and confirms that the site exceeds the maximum and will require a fourth variance.

UPDATED INFORMATION FROM THE JANUARY 11, 2022 PUBLIC HEARING

A public hearing was held on January 11, 2022. At that time, the members of the BZA expressed concern that the requested lighting would not provide sufficient security and asked that the applicant coordinate with the Munster Police Department to determine whether additional security cameras improve security.

After discussion with the Munster Police Department, staff communicated to the applicant that the existing security cameras provide sufficient coverage of the areas along the building, but additional cameras would increase the security of the parking lot. The PD suggested that Target add security cameras that expand coverage to the parking lot, specifically the customer pick up area.

The applicant provided a response in the attached email stating: *additional cameras will be installed as part of the remodel plans. A camera will be added to cover the Team Member entrance/exit from the store's dedicated Drive-Up door and the associated path to the Drive-Up stalls. An additional camera will be dedicated to the Drive-Up stalls specifically. Target will display the camera feeds on displays inside the store for team members to monitor.*

Staff is satisfied that the applicant has addressed the concerns of the PD.

UPDATED INFORMATION FROM THE FEBRUARY 8, 2022 PUBLIC HEARING

A continued public hearing was held on February 8, 2022. At that time, the members of the BZA expressed concern that the requested lighting did not provide sufficient illumination of the parking lot and asked that additional fixtures be added to four existing light poles. The applicant has indicated their willingness to install additional fixtures and has provided an updated photometric plan (dated February 16, 2022) showing the addition of one fixture each on four poles. The additional fixtures raise the average illumination from 3.96 to 4.49 fc.

Staff notes that a greater variance from Section 26-6.405.Q.3.a is now required.

Code Section	Standard	Permitted	Proposed REVISED
Section 26-6.405.Q.3.a	Illumination – Average, minimum, maximum	Illumination of Parking Areas, Parking Lots, Parking Structures, and all pedestrian ways shall be provided at an average of 1.0-2.5 footcandles and a minimum of 0.4 foot-candles	~~3.96 footcandles~~ 4.49 foot candles

VARIANCE STANDARDS

The variance process is established to provide relief to a property owner when, due to unique circumstances, compliance with the zoning code imposes a hardship or practical difficulty on a property owner. The BZA is under no obligation to grant a variance. It is the petitioner's responsibility to prove a hardship or practical difficulty. The BZA should ask the petition to address the criteria listed below.

Sec. 26-6.804.I of the Munster Zoning Code states that the basis for a variance is as follows:

g. General Standards.
A Variance may be granted only if the Decision-Making Authority has made the following determinations for such Variance:

i. the practical difficulties or unnecessary hardships that would be incurred by strict application of the Use or Development standard, as applicable, are unique and not shared by all properties in the vicinity and are not self-imposed;
ii. such Variance is the minimum Variance that will relieve such practical difficulties or unnecessary hardships, as applicable;
iii. such Variance is in the spirit of the general purposes and intent of this Article as stated in Division 1; and
iv. such Variance is so designed as to provide reasonable consideration to, among other things, the character of the neighborhood, District, or Civic Zone, the conservation of property values in the vicinity, and the guidance of Development in accordance with the Comprehensive Plan.

h. Specific to Development standards Variances:
A Variance from Development Standards may be approved or approved with conditions only if:

i. it will not be injurious to the public health, safety, morals, and general welfare of the community;
ii. the use and value of the area Adjacent to the property included in the Variance will not be affected in a substantially adverse manner; and
iii. the strict application of the Development standards will result in practical difficulties in the use of the property.

The applicant has addressed these criteria in the attached application.

RECOMMENDATION

The Board of Zoning Appeals may wish to consider the following motion:

Motion to approve multiple variances from Section 26-6.405.Q Private Lighting Standards *to install the nonconforming parking lot lights at 8005 Calumet Avenue in accordance with the plans and specifications submitted under BZA Docket No. 21-011 with the condition that a security camera will be added to cover*

the Team Member entrance/exit from the store's dedicated Drive-Up door and the associated path to the Drive-Up stalls and an additional security camera will be dedicated to the Drive-Up stalls.

DEVELOPMENTAL VARIANCE CONDITIONS OF APPROVAL

The Munster Board of Zoning Appeals is authorized to hear petitions for developmental standards variances and to approve or deny. The Board of Zoning Appeals may also impose reasonable conditions and restrictions. Indiana Code 36-7-4-918.5 lists the legal criteria for a developmental standards variance:

1. The approval will not be injurious to the public health, safety, morals, and general welfare of the community. Explain why this statement is true in this case:

The approval of the requested variance will provide consistency with existing site conditions, which are understood to be supportive of the community's health and safety.

2. The use and value of the area adjacent to the property included in the variance will not be affected in a substantially adverse manner. Explain why this statement is true in this case:

The resulting footcandles for the fixtures described in this Variance application do not extend beyond the subject property's limits.

3. The strict application of the terms of the zoning ordinance will result in practical difficulties in the use of the property. Explain why this statement is true in this case:

The strict application of the zoning ordinance would create distinct discrepancy between the existing lighting infrastructure and the proposed additions in regards to the pole height, color temperature, and fixture type.

Control Options

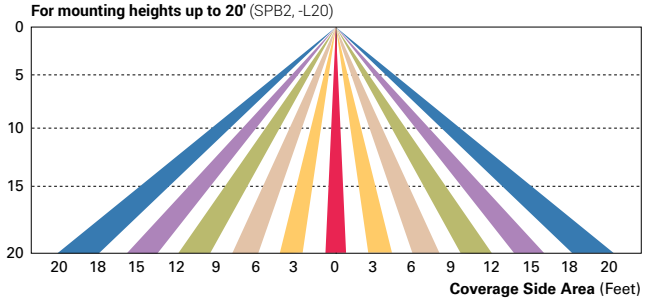
0-10V (DIM)
This fixture is offered standard with 0-10V dimming driver(s). The DIM option provides 0-10V dimming wire leads for use with a lighting control panel or other control method.

Photocontrol (BPC, PR and PR7)
Optional button-type photocontrol (BPC) and photocontrol receptacles (PR and PR7) provide a flexible solution to enable "dusk-to-dawn" lighting by sensing light levels. Advanced control systems compatible with NEMA 7-pin standards can be utilized with the PR7 receptacle.

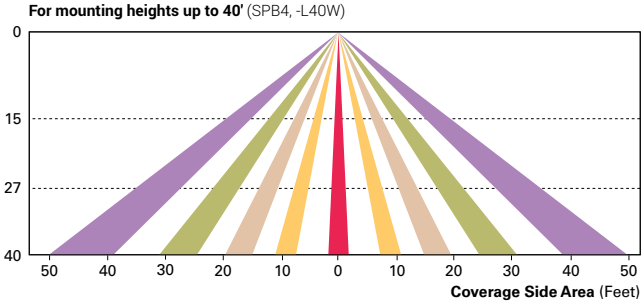
After Hours Dim (AHD)
This feature allows photocontrol-enabled luminaires to achieve additional energy savings by dimming during scheduled portions of the night. The dimming profile will automatically take effect after a "dusk-to-dawn" period has been calculated from the photocontrol input. Specify the desired dimming profile for a simple, factory-shipped dimming solution requiring no external control wiring. Reference the After Hours Dim supplemental guide for additional information.

Dimming Occupancy Sensor (SPB, MS/DIM-LXX, MS/X-LXX and MS-LXX)
These sensors are factory installed in the luminaire housing. When the SPB or MS/DIM sensor options are selected, the occupancy sensor is connected to a dimming driver and the entire luminaire dims when there is no activity detected. When activity is detected, the luminaire returns to full light output. The MS/DIM sensor is factory preset to dim down to approximately 50 percent power with a time delay of five minutes. The MS-LXX sensor is factory preset to turn the luminaire off after five minutes of no activity. The MS/X-LXX is also preset for five minutes and only controls the specified number of light engines to maintain steady output from the remaining light engines. SPB motion sensors require the Sensor Configuration mobile application by Wattstopper to change factory default dimming level, time delay, sensitivity and other parameters. Available for iOS and Android devices. The SPB sensor is factory preset to dim down to approximately 10% power with a time delay of five minutes. The MS/DIM occupancy sensors require the FSIR-100 programming tool to adjust factory defaults.

For mounting heights up to 20' (SPB2, -L20)

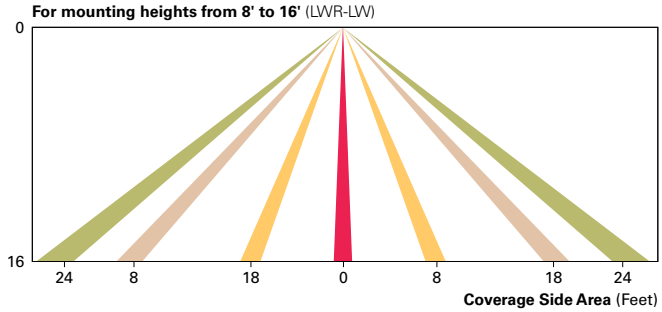


For mounting heights up to 40' (SPB4, -L40W)

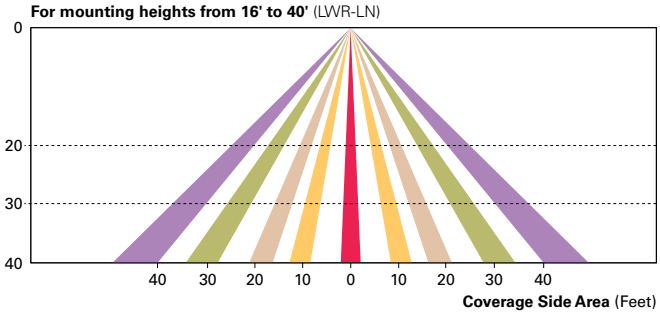


Enlighted Wireless Control and Monitoring System (LWR-LW and LWR-LN)
Enlighted is a connected lighting solution that combines a broad selection of energy-efficient LED luminaires with a powerful integrated wireless sensor system. The sensor controls the lighting system in compliance with the latest energy codes and collects valuable data about building performance and use. Software applications turn the granular data into information through energy dashboards and specialized apps that make it simple and help optimize the use of building resources, beyond lighting.

For mounting heights from 8' to 16' (LWR-LW)



For mounting heights from 16' to 40' (LWR-LN)



WaveLinx Wireless Outdoor Lighting Control Module (WOLC-7P-10A)
The 7-pin wireless outdoor lighting control module enables WaveLinx to control outdoor area, site and flood lighting. WaveLinx controls outdoor lighting using schedules to provide ON, OFF and dimming controls based on astronomic or time schedules based on a 7 day week.

LumenSafe Integrated Network Security Camera (LD)
Cooper Lighting Solutions brings ease of camera deployment to a whole new level. No additional wiring is needed beyond providing line power to the luminaire. A variety of networking options allows security integrators to design the optimal solution for active surveillance. As the ideal solution to meet the needs for active surveillance, the LumenSafe integrated network camera is a streamlined, outdoor-ready fixed dome that provides HDTV 1080p video. This IP camera is optimally designed for deployment in the video management system or security software platform of choice.

Synapse (DIM10)
SimplySNAP integrated wireless controls system by Synapse. Includes factory installed DIM10 Synapse control module and MS/DC motion sensor; requires additional Synapse system components for operation. Contact Synapse at www.synapsewireless.com for product support, warranty and terms and conditions.
