

Centennial Park pathway addition concept #1

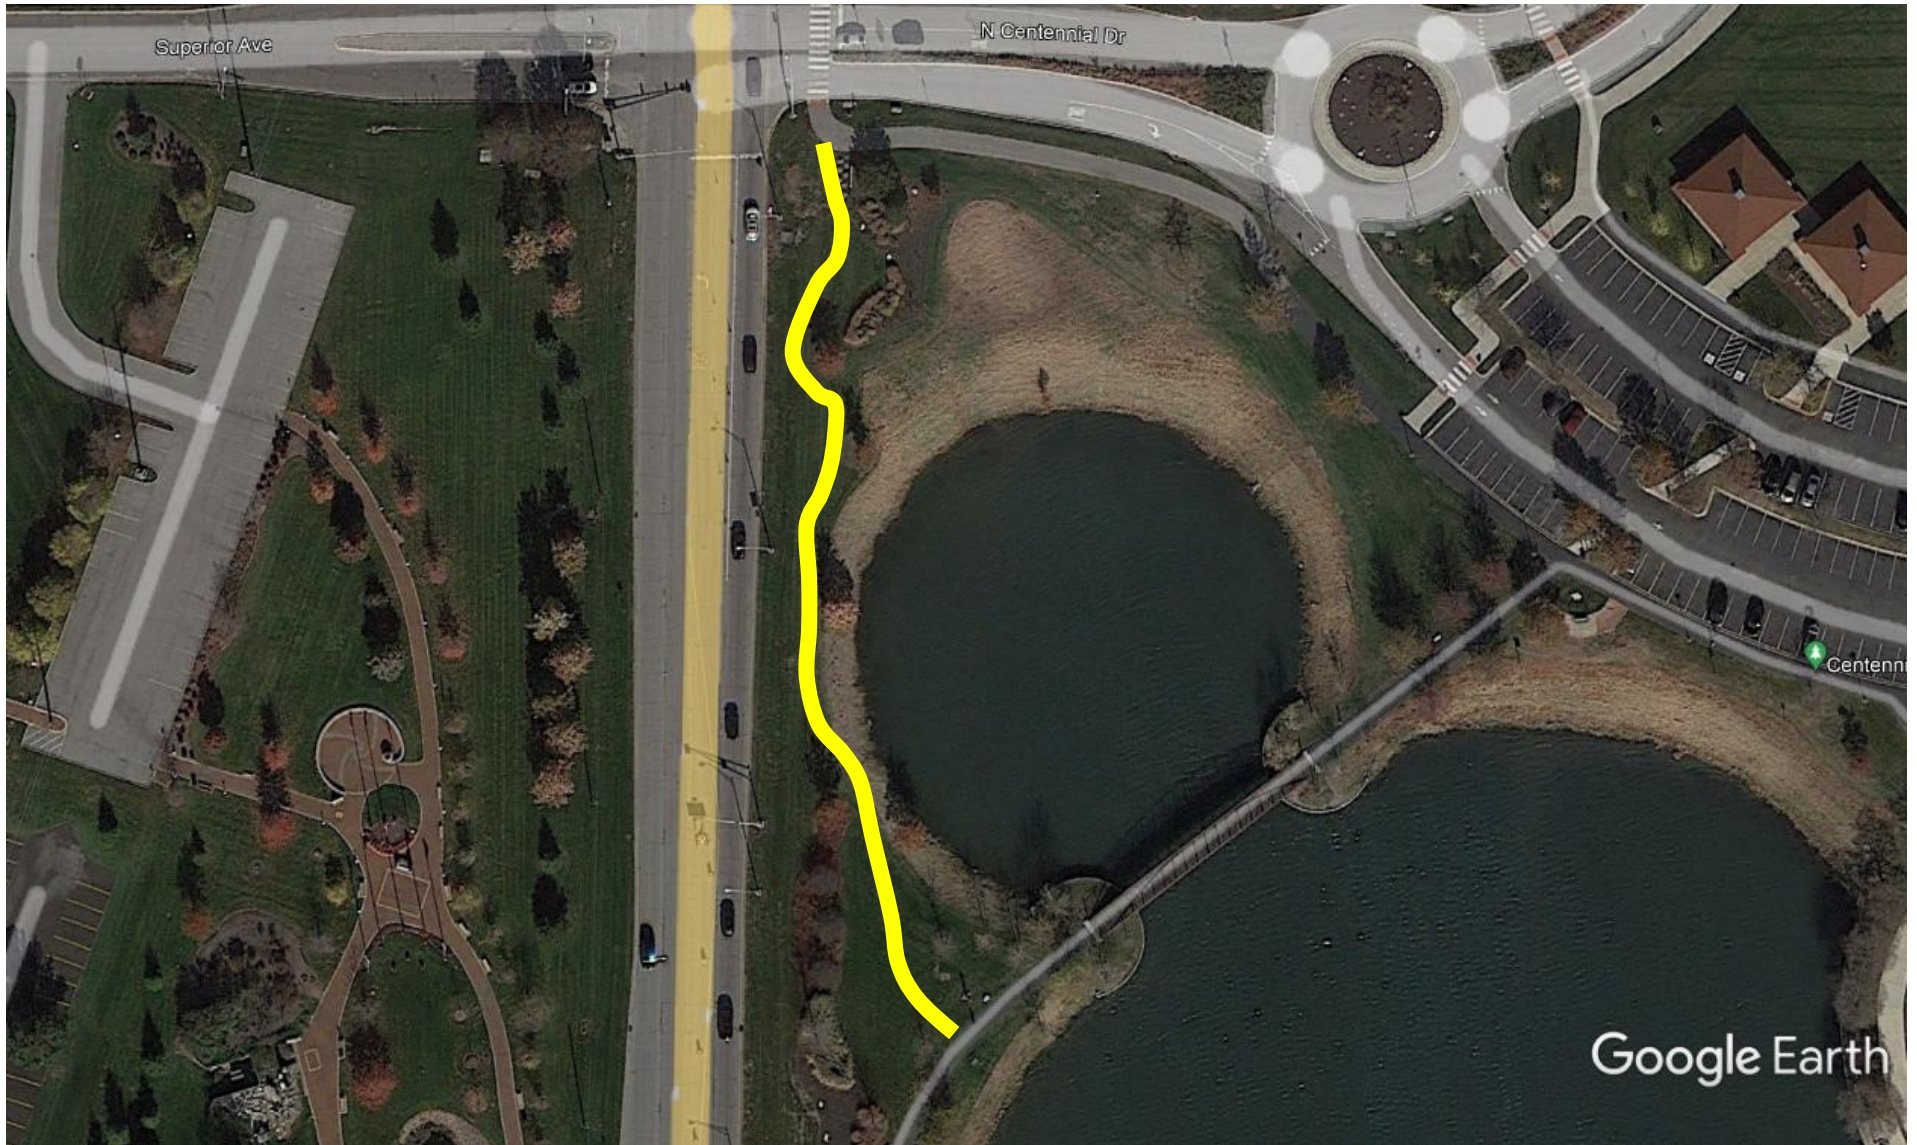

North side of north parking lot to connect to the east to the Pennsy Greenway pathway.

Provides more alternatives for 'loops' to walk at the park. Also a better connection for bikes to get through the park who may be on the Pennsy trail instead of speeding through the pathway from by the north dog park entrance, along the formal gardens, toward the north parking lot. Extends the walking path on the north side of the parking lot that currently just ends for no reason.

approx. 180 ' in length

Would need a culvert to make the drainage work along the old railroad corridor.

Engineer's estimate: \$19,000

Centennial Park pathway addition concept #2

West side of park near north entrance.

This addition would create an alternative route than going on the bridge. It would also be part of a larger 'loop' at the park for those just wanting to get more steps in. Might help to avoid conflict with users on the bridge (casual walkers, picture takers, fishing) in what can be a congested area. It would also create more of a direct pathway paralleling Calumet Ave. for pedestrians from Cobblestones heading north or vice versa.

approx. 475' in length.

Engineer's estimate: \$42,000
