

## WHAT WORK IS NIPSCO PERFORMING?

To support the resiliency and reliability of the electric system, we will be upgrading the utility poles and wire in your neighborhood.

### CONSTRUCTION STARTS

**July**

### CONSTRUCTION ENDS

**December**

### NIPSCO APPROVED CONTRACTOR

**Robert Henry  
Corporation**

All NIPSCO employees and contractors can be identified by marked vehicles and carry a photo ID. Your safety is important, please request proper identification from anyone approaching your property.

## WHAT ARE THE KEY BENEFITS TO CUSTOMERS WITH THIS UPGRADE?

- **Less frequency of service interruptions**
- **Shorter time duration when a service interruption occurs**
- **Decreased future maintenance work**

Most activities will occur within existing utility corridors situated at the front, rear, or sides of your residential or commercial property.

Be ready for increased construction vehicle presence, bucket trucks, protective ground mats, and excavation work around your premises.

### Initial Assessment

We will contact 811 to ensure all buried public utilities are identified with markers, posts and temporary marking paint. Please maintain these indicators in place

### Easement Requirements

Objects within the utility corridor, including fencing and landscaping elements, might require removal. Should this become necessary or if we need further property access, we will contact you personally.

### Upgraded Wood Utility Poles and Wire

New wood utility poles may be staged in your neighborhood prior to installation. Crews will utilize small machinery and bucket trucks for installation. Expect a gap of several weeks might pass between the installation of the poles, the stringing of new wire, and the final restoration.

### Power Interruptions

We will notify you ahead of time of any service interruptions associated with this work.
