Subject: Re: Stop Sign Approval

Bob,

I concur with the data and your recommendations. Speeding, for sure, is a problem at these locations and there are pedestrians walking and kids biking and crossing these streets in the subdivision. I have seen this in White Oak subdivision. The streets are wide and drivers are speeding on these residential streets where the posted speed limit is 25 mph. It is important to consider the safety of pedestrians and bicyclists. There are no other measures to slow down the drivers and installing Stop signs will help in improving the overall safety and it will facilitate the enforcement of the speed limits on these streets.

Thanks,

Satya

Subject: Stop Sign Approval

Please see the attached location of the proposed stop signs. We are seeking SEH approval that the stop signs are warranted. We have collected the necessary data and we "the town" believe these stop signs will make a significant impact in overall safety for the residents in this area.
